MycoSelect™ is an exceptional liquid immune tonic, designed to safely and naturally support and enhance immune system function. It combines six potent medicinal mushroom extracts in a naturally-sweetened, dropper-delivery format suitable for use by adults and children. The unique blend of mushroom extracts in MycoSelect™ is rich in polysaccharide compounds suggested by research to help promote a healthy innate and adaptive immune response.

MycoSelect™ contains the following premium ingredients:

**GRIFOLA FRONDOUS (MAITAKE)** is a prized medicinal and culinary mushroom. Rich in beta glucans, Maitake functions as a biological response modifier. It is shown to enhance cytokine production and to activate macrophages, T cells and NK cells.

**CORDYCEPS SINENSIS** is a traditional Chinese medicinal fungus, used for over 2,000 years to treat inflammation, neoplasms and other conditions. Cordyceps contains the bioactive polysaccharide cordycepin along with synergistic compounds which support a healthy immune response through mechanisms such as modulation of phagocytosis and macrophage activity.

**CORIOLUS VERSICOLOR** is a woody tree mushroom also known as Trametes versicolor, Cloud Fungus or Turkey Tail. Coriolus contains PSP, a polysaccharide peptide that has been shown to function as a biological response modifier. Research suggests that PSP potentiates the immunological response by stimulating immune cells in different ways, including promotion of lymphocyte proliferation.

GANODERMA LUCIDUM (REISHI) has been used for thousands of years in traditional Asian medicine to promote longevity. Reishi contains a number of anti-inflammatory and immunomodulating compounds, notably beta-D-glucans, triterpenoids, proteins, and steroid-like ganoderic acids. Research suggests Reishi activates T cells, macrophages and natural killer cells, and may help protect the body from radiation damage.

LENTINAN EDODES (SHIITAKE) is the second most popular edible mushroom in the world. Shiitake is rich in bioactive polysaccharide compounds including lentinan, and has been studied extensively for its benefits to immune and cellular health.

TREMELLA FUCIFORMUS, commonly known as Snow Fungus or Silver Ear, is a jelly-like culinary and medicinal mushroom. Immune-supportive polysaccharides in Tremella include acidic heteroglycans, which may help stimulate cytokine production.

NATURAL FLAVORS & SWEETENERS give MycoSelect™ a pleasant, fruity flavor. Stevia is a non-caloric sweetener derived from the leaves of the stevia plant (Stevia rebaudiana). Fructose is a monosaccharide naturally found in fruits and honey. Each dropper-full serving of MycoSelect™ contains 50 mg fructose, the same amount of fructose found in 1/6 teaspoon of pure apple juice. Neither stevia nor fructose raise blood sugar levels; small amounts of fructose have been shown to help improve glycemic control.
